Oil department

The oil-works or treatment of oleaginous seed consists in the extraction seed's oil and to producing cakes for animal food or biodiesel.

Due to the great diversity and specific properties of each seed, and depending on whether final product's outlet, four great process exist:

- Cold pressure
- Hot pressure
- Cold pressure + Hot pressure
- Pre pressure

In full pressure like in pre pressure "La Mécanique Moderne" proposes reliable equipments for each seed and capacity.

The research and development department of our manufacturing plant practices tests in real production context. So that we offer a custom-tailored solution adapted to your production.
